

Should AI Be Involved In My Medical Care?

Artificial intelligence, or AI, is increasingly used in healthcare. It helps medical professionals with note-taking, decision-making, and treatment planning. While AI can be helpful, it can also make mistakes, provide incomplete responses, or have biases.¹ For this reason, it is important for you to know when and how it is being used in your care.

You have the right to understand how AI might affect your health and to decide if you want it to be part of your care and to what extent. This tool will take ~10 minutes to complete and will help you learn the facts, think about what matters most to you, and make choices that feel right for you in different situations.

How to Use This Tool (this should be a dropdown with steps) :

1. Follow the 5 steps in order:
 - Learn the facts about AI in healthcare.
 - Show your values using the sliders.
 - Quiz yourself to check understanding.
 - Make your decision about AI use.
 - Get your summary of all responses.
2. Save or print your summary.
Download or print the summary so you can keep it for your records.
3. Use your summary in conversations.
Share it with your care team, family, or anyone you choose.
You can also use it as documentation to request full, limited, or no AI use in your care.

1. Get The Facts

Your Options

- 1) Agree to the use of AI in your medical care in full.
- 2) Request that AI tools are not used for certain aspects of your care (ex: taking notes, diagnostic help, etc).
- 3) Deny AI use in your care.

Some healthcare facilities let patients choose when and how AI is used in their care, but not all do. Knowing your options and how you feel about AI can help you avoid situations where tools you don't want are used without you knowing.

What is AI and How Does it Work?

AI (Artificial Intelligence) is a computer tool that looks at massive amounts of data to find patterns. It uses these patterns to make guesses or suggestions. Unlike a human, AI does not have feelings or thoughts.¹

Developed by: Marharyta Krylova, BS

Last Updated: 01/08/2025

Next Update: Annually or when new developments become available.

AI developers follow six general steps when creating AI:

- 1) decide what AI should do,
- 2) gather information the AI will learn from,
- 3) teach the computer to find patterns in the data,
- 4) check if the tool works well,
- 5) put AI into real use to help people,
- 6) keep checking the tool and make updates over time.

Although these are the best practices for developing AI tools, there are no laws or regulations to make sure these steps are followed.

Common Uses of AI in Medicine

AI has been used in healthcare more and more since 2017.² Below are some common ways it helps doctors and patients today:

1. Helping doctors find and monitor health problems
 - Detect early signs of disease from lab results or medical images.^{3,4}
 - Help read X-rays, CT scans, MRIs, heart tests, and other imaging results to spot issues faster.^{4,5}
2. Supporting diagnosis and treatment decisions
 - Suggest possible diagnoses based on medical information.⁴
 - Offer treatment options that follow medical recommendations.^{4,6}
 - Predict health risks, like complications, to help doctors plan the best care.⁶
3. Making medical notes and visit summaries
 - Turn doctors' or patients' speech into written visit summaries.⁷⁻⁹
 - Write drafts of clinical notes and hospital discharge summaries.^{10,11}
 - Organize and update patient medical records more quickly.^{10,12}
4. Reducing paperwork and administrative work
 - Suggest correct billing and insurance codes.¹³
 - Help order lab tests and/or medications more efficiently.¹⁴
 - Decrease time spent on forms so doctors can focus more on patients.¹⁵
5. Helping patients stay organized and involved in their care
 - Send appointment reminders and follow-up messages.¹⁶
 - Collect pre-visit information through virtual assistants or online forms.¹⁷
 - Translation of medical information for non-English speakers.¹⁸
 - Provide simple explanations or instructions to patients.^{19,20}
 - Help patients manage medications and track symptoms at home.^{1,21}

Last Updated: 01/08/2025

Next Update: Annually or when new developments become available.

Benefits of AI²²

Helps Doctors Do Their Jobs

- Gives clear and organized answers
- Helps doctors think through medical problems
- Helps connect and understand data
- Can help with diagnosing illnesses with
- Works well for reading medical images, like X-rays
- Can reduce human-error mistakes

Helps Patients

- Explains medical information in simple ways
- Makes it easier for doctors and patients to talk
- Can help with many languages
- Supports more personalized care

Saves Time and Energy

- Helps with writing medical notes
- Makes reports, like radiology reports, easier to read
- Helps clinics run more smoothly
- Can save staff time and hospital resources

Potential Harms and Risks of AI²²

Accuracy Problems

- AI learns from data, which can include bias
- May not work well for rare or complex cases
- Can give answers that are partly wrong or incomplete
- Gets less accurate with harder questions
- Accuracy levels can be inconsistent

Missing Human Qualities

- Does not understand feelings
- Could lead to less human involvement if overused
- Can lead to overreliance if medical professionals assume it is correct
- Still needs doctors to check its work

Fairness and Access

- Could make gaps worse if some groups have less access to technology
- Some groups may not be well-represented in the data AI learns from

Privacy and Legal Concerns

- There are risks of hacking and data leaks
- It is not always clear who is responsible if AI makes a mistake

Developed by: Marharyta Krylova, BS

Last Updated: 01/08/2025

Next Update: Annually or when new developments become available.

Patient Rights and Choice

You should be told when AI is used in your care, and you should have the choice to accept or decline its use. Your doctor should explain the risks and benefits so you can make an informed choice. Even if a hospital uses AI, can decide if you want it used for your health.²³

Summary / Key Takeaways

- AI tools help doctors by organizing information, detecting health problems, and saving time, but doctors still make final decisions.
- AI has benefits, like faster results, simple explanations of medical information, support for non-English speakers, and more.
- AI also has risks, such as possible mistakes, bias, or privacy concerns, so it is important to ask questions about the AI tools being used.
- You have a right to choose if and how AI is used in your care. You can agree to full use, limited use, or none at all.

2. Your Feelings

Your personal comfort and priorities are just as important as the medical facts. Take a moment to think about what matters most to you, and use the sliders below to show how you feel about each statement. There are no right or wrong answers. This is about your own preferences.

	Reasons to allow AI use in your care	Reasons to allow use in your care
Detecting Medical Problems	I want AI to help find medical problems early because I value getting the fastest, most accurate care possible.	I prefer only a human to check my tests and scans because I value personal review and human judgment.
Diagnosis and Treatment Decisions	I want AI to help my doctor think through my diagnosis or treatment	I prefer my doctor to make all decisions without AI because

Developed by: Marharyta Krylova, BS

Last Updated: 01/08/2025

Next Update: Annually or when new developments become available.

	because I value having extra tools for safety and accuracy.	I value human experience and trust their judgment most.
Medical Notes and Visit Summaries	I am comfortable with AI helping write or organize my visit notes because I value clear and easy-to-read information.	I want only a human to handle my notes because I value personal control over my medical information.
Paperwork and Administrative Work	I want AI to help with forms, scheduling, and check-in because I value fast and easy visits.	I prefer people to handle my paperwork because I value human interaction.
Virtual Assistants	I want quick and easy access to information and am okay with using an AI assistant if it gives me that.	I prefer not to use an AI assistant because I value personal guidance and feel more comfortable speaking to a real person.
Privacy Concerns	I am okay with AI using my medical data if it can improve my care.	I do not want any of my medical data to be used by AI.
Technical Understanding	I want AI used even if I don't fully understand how it works.	I prefer only using tools I completely understand, even if AI could help.
Efficiency	I value efficiency and AI tools can help make my care faster and easier.	I would prefer slower care if it means less AI involvement.
Bias	I care about fairness and think that AI can do a good job treating all patients fairly.	I prefer humans making decisions when fairness is important.
	My other reasons (text box)	My other reasons (text box)

3. Quiz Yourself

This short quiz is here to help you see how much you've understood so far. It is not a test and there are no right or wrong scores. Think of it as feedback to help you learn and feel more confident about the information you just reviewed.

Check The Facts

Developed by: Marharyta Krylova, BS

Last Updated: 01/08/2025

Next Update: Annually or when new developments become available.

1. What is AI (Artificial Intelligence) in a doctor's office?

- A computer tool that finds patterns to help your doctor.
 - Correct: AI looks at lots of data to help doctors make guesses, but the doctor still makes the final choice.
- A robot that thinks and feels just like a human.
 - Incorrect: AI does not have feelings. It only follows instructions and patterns it has learned.
- A machine that replaces your doctor or nurse.
 - Incorrect: AI is a helper for your medical team, not a replacement for them.

2. What is one good thing (benefit) about using AI?

- It can help find health problems faster and explain things simply.
 - Correct: AI is great at reading X-rays quickly and can help explain medical words in a way that is easy to understand.
- It makes sure there are never any mistakes in your care.
 - Incorrect: AI can still make errors, especially if a health problem is rare or very complicated.
- It knows everything about every patient perfectly.
 - Incorrect: AI only knows what it has been taught, so it doesn't know everything.

3. What is a risk or "downside" of using AI?

- AI is always fair to every person who uses it.
 - Incorrect: AI can have "bias." This means it might not work as well for some groups of people as it does for others.
- AI can sometimes give wrong answers or be hard to understand.
 - Correct: Sometimes AI gives an answer but cannot explain why, or the answer might be only partly right.
- The government checks every AI tool to make sure it is 100% safe.
 - Incorrect: Right now, there are no official rules that everyone must follow when making these tools.

4. What are your rights as a patient?

- You have to use AI if the hospital tells you to.
 - Incorrect: You have the right to ask questions and say "no" if you are not comfortable.
- You can choose how much AI is used in your care.
 - Correct: You can say "yes" to all AI, "no" to all AI, or only use it for some things, like taking notes.

Developed by: Marharyta Krylova, BS

Last Updated: 01/08/2025

Next Update: Annually or when new developments become available.

- Doctors do not have to tell you if they are using AI.
 - Incorrect: You have the right to know when and how AI is being used to help with your health.

4. Your Decision

Now that you've learned what AI is, how it's used in medicine, and its risks and benefits, you might have a better idea of how you feel about it being used in your care. How do you feel about it right now?

Not comfortable with AI use in my care.	Comfortable with some AI use, but still have a lot of concerns.	Very comfortable with AI use in my care.
---	---	--

Use the following space if needed to provide details about your decision:

Certainty

How sure do you feel about your decision right now?

Not sure at all.	Somewhat sure.	Very sure.
------------------	----------------	------------

Which of the following applies to you right now?

- I am confident in my decision and am ready to take action.
- I want to discuss options with others.
- I do not fully understand my options, and want to learn more.

Use the following space to list your thoughts, questions, or concerns:

5. Your Summary

What Matters To You

Developed by: Marharyta Krylova, BS

Last Updated: 01/08/2025

Next Update: Annually or when new developments become available.

Your Responses - paste responses to section 2 here

Your Understanding of The Facts

Information That You Understand

If the patient answered the quiz questions correctly, each of the following bullet points would appear for each question they got right:

1. AI is a computer tool that learns from information and helps doctors make decisions. It does not replace doctors, however, it supports them.
2. You have a choice in how AI is used in your care. You can agree to limit, or say no to AI, and you can always ask questions.
3. AI has a lot of uses in healthcare, some of which include reading medical images and helping doctors in finding medical problems.
4. AI can help explain medical information to patients in simple and easy-to-understand ways.
5. AI can sometimes give answers that are wrong or unfair because it learns from the data it is given.
6. Doctors must always check the AI's work and make the final decisions about your care. The doctor stays in charge, not AI.
7. You can ask your care team to not use AI for certain parts of your care.

Information That You May Need to Review

This section will include the same statements as the previous one but for the questions that the patient gets incorrectly.

Your Decision

Which Way You Are Leaning - include the scale response for their decision and the comments they provided.

Comments you provided: _____

How Sure You Are About The Decision - include their scale response for the "how sure are you?" question

Developed by: Marharyta Krylova, BS

Last Updated: 01/08/2025

Next Update: Annually or when new developments become available.

Next Steps - this will include one of the following statements based on their response to the next steps question in the certainly section

- You feel sure about your choice and are ready to request adjustments around AI use in your care.
- You feel unsure and want to talk with someone before deciding.
- You said you don't fully understand your choices yet and want more information.

Comments you provided: _____

Suggested wording to share with trusted persons or clinicians:

You can copy-paste one of these when talking or emailing your care team:

"I completed a decision about AI use in my care. I would like [full / limited / no] AI use. Please see my summary for details and the specific tasks where I prefer AI [to be / not to be] used."

"I want to discuss how AI may be used in my care. My patient decision aid summary says I'm concerned about [...]; can you explain which tools you use, how they are used, and whether I can opt out of specific uses?"

If you want to look for your own information, here are simple steps to follow:

1. **Find good sources:** Use trusted sites like PubMed, major medical organizations, or government health pages. Try to avoid blogs, opinions, or sites that are selling something.
2. **Check study quality:** Choose articles that were peer-reviewed. See if the study had enough people, clear methods, and was done by reliable researchers.
3. **Understand what it means:** Think about whether the results apply to you. Notice if the findings are strong, unclear, or mixed. Look at more than one source before making a conclusion.
4. **Ask a clinician if you're unsure:** Bring any information you find to your doctor or care team so they can help explain what it means for your situation.

Funding: The development of this tool received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors

Data Usage Statement: This patient decision aid does not collect, store, or transmit any personal or health information. All inputs are used solely in real time to support the patient's decision-making process. Once the patient finishes using the tool, all information is immediately deleted and cannot be retrieved or linked back to the user in any way.

Evidence Rigor Statement: The information in this tool was gathered through searches on Google Scholar and PubMed using key terms such as "patient decision aid for AI use," "informed consent for AI in medical care," "AI in healthcare," and "patient attitudes toward AI." Only peer-reviewed articles published in trusted journals and authored by qualified researchers were included. Studies were assessed for clear methods and reliable data. The key findings from each study were summarized and rewritten in plain language to make the information accessible and understandable for patients,

Quality of Scientific Evidence Statement: The information in this tool is based on peer-reviewed scientific articles and reputable academic sources. While all sources have been carefully selected, the quality and rigor of these studies may vary, and some may have limitations or gaps in available data. The content presented here reflects the best available evidence at the time of development and has been reviewed and summarized to the best of the developers' knowledge and judgment.

Conflict of Interest: The authors/developers of the tool report no conflicts of interest.
